

UNIVERSITY OF WASHINGTON PSYCHIATRY RESIDENCY

The Residency Program believes that it is important that psychiatrists understand the contribution of their own psychological and interpersonal characteristics to the doctor-patient relationship.

To foster such self-awareness, each psychiatry resident is required, by the time of Graduation, to have completed six months of either:

- Weekly personal psychotherapy
- OR
- Weekly supervision focusing on the resident's own contributions to doctor-patient relationships

This is to document that _____ (name of resident) has fulfilled this requirement.
